PROFESSIONAL SUMMARY

Detail-oriented MCA graduate with practical experience building scalable backend architectures, microservices, and RESTful APIs using Java and the Spring ecosystem. Proficient in relational database design, ORM frameworks, and modern frontend integration with ReactJS. Strong foundation in Object-Oriented Programming (OOP), Data Structures, and Algorithms (DSA), with a proven track record of designing secure, decoupled, and efficient software solutions.

TECHNICAL SKILLS

Languages:	Java (Core Java, OOP, Collections, Multithreading, Java 8 Streams), SQL, JavaScript
Backend & Frameworks:	Spring Boot, Spring Microservices, Spring MVC, Spring Security, REST APIs, JPA, Hibernate
Databases:	PostgreSQL, MySQL
Frontend:	ReactJS, HTML5, CSS3
Tools & Infrastructure:	Git, GitHub, Maven, Postman, RabbitMQ, Eureka Server

TECHNICAL PROJECTS

Nexus HR Management System (Java Fullstack Platform) | Java, Spring Boot, Microservices, PostgreSQL, RabbitMQ, Eureka, ReactJS

ONGOING

- Architected an enterprise-grade fullstack HR platform using **Microservices** architecture to completely decouple core operational modules.
- Designed and implemented secure, high-throughput **REST APIs** with centralized service discovery managed via **Eureka Server**.
- Integrated **RabbitMQ** to execute asynchronous event-driven messaging, guaranteeing eventual data consistency across modules.

AI-Powered Fitness Application | Java, Spring Boot, ReactJS, Gemini AI API, Spring Cloud, MySQL

- Engineered a full-stack fitness application utilizing a responsive client dashboard built in **ReactJS** backed by a highly optimized **Spring Boot** microservices container.
- Integrated **Gemini AI API** to securely ingest and process real-time user biometric metrics, dynamically rendering automated and personalized workout regimens.
- Configured robust **Eureka Server** instances for dynamic cross-service registration and intelligent load balancing, minimizing inter-service message latency.

Blood Bank Management System | Java, Spring Boot, Spring Data JPA, MySQL, REST APIs

- Developed a centralized data platform to monitor blood donors, manage real-time inventory levels, and optimize patient match request processing workflows.
- Implemented high-performance transaction-safe **CRUD operations** and server-side data validation constraints to guarantee strict schema data integrity across 10+ relational tables.
- Optimized physical database schema design in **MySQL** using **Hibernate/JPA** tracking, streamlining relational queries and significantly reducing analytical query lookup execution times.

EDUCATION

Master of Computer Applications (MCA) • CGPA: 7.8/10.0

2024 – 2026

Noida Institute of Engineering and Technology

Bachelor of Computer Applications (BCA) • Graduated

2021 – 2024

Chandigarh Group of Colleges, Jhanjeri

ACHIEVEMENTS & CERTIFICATIONS

- Data Structures & Algorithms:** Successfully solved 125+ complex DSA problems on competitive programming platforms (including LeetCode and HackerRank), demonstrating crisp logical reasoning and data manipulation capabilities.
- Backend Engineering:** Built, tested, and deployed multiple independent Spring Boot systems engineered with RESTful architecture patterns, layered MVC patterns, and comprehensive relational database indexing.
